SUMMARY

Full-stack Software Engineer with 1 year of experience delivering end-to-end features for AI-powered PaaS products. Highly skilled in **TypeScript, JavaScript, React, Python, Django, MongoDB and PostgreSQL**, with strengths across responsive interfaces, reusable back-end services, data workflows and agent-assisted development. Experienced in deploying and verifying releases on **AWS EC2** through SSH and IAM-controlled access, with **CI/CD workflows** using GitHub Actions and AWS CodeCommit. Automated testing, validation, data processing and scheduled workflows while delivering in fast-moving Agile environments.

SKILLS

Languages: Python, JavaScript, Java, SQL, R
Back end: Django, FastAPI, Flask, REST APIs, Celery
Front end: Vue.js, React, HTML5, CSS3, responsive UI, accessibility/WCAG, Bootstrap, Tailwind
Data: MongoDB, MongoEngine, PostgreSQL, Pandas, Microsoft Access
Cloud and DevOps: AWS EC2, IAM-controlled access, AWS CodeCommit, Git, GitHub Actions, Cloudflare
Practices: Full-stack development, data modelling, CI/CD, automated testing, agile delivery, technical documentation

WORK EXPERIENCES

Software Engineer 2026.05 - 2026.08
Robotic Marketer Melbourne, Australia

Description: Developed full-stack capabilities for an AI-powered marketing platform, covering data, interfaces and cloud delivery.

Technologies: Python, Django, MongoDB, MongoEngine, JavaScript, HTML5, CSS3, Celery, Git, AWS EC2, IAM

- Built and shipped end-to-end full-stack features with **TS** and **JS**, expanding the capabilities of an AI-powered marketing platform.
- Used **AI agents** across planning, implementation, testing and review, accelerating iteration and delivery.
- Developed responsive **TS** and **JS** interfaces with Django services, connecting front-end and back-end workflows.
- Built and maintained **unit tests** with Python and Django, catching regressions and improving product stability.
- Designed reusable **MongoDB** models and service logic, improving system scalability and maintainability.
- Implemented **v**alidation, duplicate detection and rollback controls in Django, improving data integrity and recovery.
- Built workflow automation with **Celery** for analytics and reporting, enabling timely operational and performance insights.
- Implemented **CI/CD** workflows with Git and AWS CodeCommit, supporting repeatable builds, deployments and release verification.
- Deployed and verified Django releases on **AWS EC2** through SSH and IAM, improving release reliability.

Python Developer 2021.06 - 2022.06
Hangzhou Youzan Technology Co., Ltd Hangzhou, China

Description: Developed RESTful back-end services and automated finance data workflows for affiliated-company funding, account operations and reporting.

Technologies: Python, FastAPI, PostgreSQL, Pandas, SQL, Excel/VBA, GitHub Actions, Railway

- Built **RESTful** back-end services with **FastAPI and PostgreSQL**, providing reliable finance data storage and retrieval.
- Developed data pipelines with Python, Pandas and SQL, consolidating 100+ account types across 30+ affiliated companies.
- Implemented reconciliation and validation workflows with Python/Pandas, improving data consistency and variance detection.
- Built automated analysis and reporting with **Python and Excel/VBA**, reducing manual checks and supporting audit preparation.
- Translated finance requirements into reusable back-end workflows with Python and SQL, improving cross-team reporting consistency.
- Implemented **CI/CD deployment** with AWS, enabling repeatable releases with secure CORS and environment configuration.

EDUCATION

Monash University 2023.07 - 2025.05
Master of Information Technology

The University of Nottingham Ningbo China 2019.09 - 2023.07
Bachelor of International Business Economics (Honours)
