github.com/tiezhu-12138 | linkedin.com/in/jiahang-sun-66b350355

SUMMARY

Full-stack Software Engineer with more than one year of commercial experience delivering end-to-end features for AI-powered PaaS products, finance workflows and web applications. Highly skilled in **TypeScript and JavaScript**, React, Next.js, Vue 3, Python, Django, FastAPI, Node.js, MongoDB and PostgreSQL, spanning responsive interfaces, reusable backend services and data pipelines. Experienced in automated testing, CI/CD, AWS EC2 releases and AI-agent-assisted development within Agile teams.

TECHNICAL SKILLS

Languages: TypeScript, Python, SQL, Java, R
Frontend: React, Next.js, Vue 3, HTML5, CSS3, Bootstrap, Tailwind
Backend: Node.js, Django, FastAPI, Flask, REST APIs, Celery
Data and automation: PostgreSQL, MongoDB, MongoEngine, Pandas, Microsoft Access, Excel/VBA
Cloud and DevOps: AWS EC2, IAM-controlled access, AWS CodeCommit, GitHub Actions, Git, Railway, Cloudflare
Practices: Unit testing, data modelling, CI/CD, pull requests, code reviews, Agile delivery, documentation
Interface quality: Responsive UI, accessibility/WCAG, cross-browser interface styling

WORK EXPERIENCE

Software Engineer

2026.05 - 2026.08

Robotic Marketer

Melbourne, Australia

Scope: Delivered full-stack capabilities for an AI-powered marketing platform across data, responsive interfaces, workflow automation and cloud releases.

Technologies: TypeScript, React, Python, Django, MongoDB, MongoEngine, HTML5, CSS3, Celery, Git, AWS EC2, IAM

- Built and shipped end-to-end full-stack features with **TypeScript, React, Python and Django**, expanding the capabilities of an AI-powered marketing platform.
- Developed and tested responsive **React CRUD interfaces** with TypeScript and CSS3 alongside existing Django interfaces, improving runtime efficiency and interface styling.
- Designed reusable **Python/Django services** and MongoDB models, strengthening maintainability, scalability and shared service logic across data and interface workflows.
- Built and maintained **Python and Django unit tests**, catching regressions and strengthening confidence in full-stack changes across data and interface releases.
- Implemented validation, duplicate-detection and rollback controls in **Django**, improving data integrity and recovery.
- Automated analytics and reporting with **Celery workflows**, enabling timely operational and performance insights.
- Implemented **CI/CD workflows** with Git and AWS CodeCommit, supporting repeatable builds, deployments and release verification across planned delivery cycles.
- Deployed and verified Django releases on **AWS EC2** through SSH and IAM-controlled access, improving release reliability and operational delivery confidence.
- Used **AI agents** across planning, implementation, testing and code review, accelerating iteration and delivery within an Agile team across varied engineering tasks.

WORK EXPERIENCE (CONTINUED)

Python Developer

2021.06 - 2022.06

Hangzhou Youzan Technology Co., Ltd

Hangzhou, China

Scope: Developed web applications, RESTful backend services and automated finance-data workflows for affiliated-company funding, account operations and reporting.

Technologies: TypeScript, Next.js, Node.js, Vue 3, Python, FastAPI, PostgreSQL, Pandas, SQL, Excel/VBA, GitHub Actions, Railway, AWS, CORS and environment configuration

- Created web interfaces with **Next.js, TypeScript and Vue 3**, integrating REST APIs for automated financial calculations, visualisation and reporting.
- Delivered backend and API workflows with **Node.js, FastAPI and PostgreSQL**, supporting account operations and consistent finance-data access for reporting teams.
- Developed data pipelines with **Python, Pandas and SQL**, consolidating 100+ account types across 30+ affiliated companies for recurring finance reporting.
- Implemented reconciliation and validation workflows with **Python and Pandas**, improving data consistency and variance detection across affiliated-company accounts.
- Analysed affiliated-company funding status and account movements, translating finance requirements into reusable **Python and SQL** workflows.
- Automated recurring analysis and reporting with **Python and Excel/VBA**, reducing manual checks and supporting audit preparation for finance stakeholders.
- Produced finance summaries and reporting tables for variance review, cross-team reporting and audit support.
- Configured **CI/CD deployments** with GitHub Actions across Railway and AWS, using CORS and environment configuration to support repeatable releases.

EDUCATION

Monash University 2023.07 - 2025.05

Master of Information Technology

The University of Nottingham 2019.09 - 2023.07

Bachelor of International Business Economics (Honours)
